How to connect TaHoma to Apple HomeKit

Easily control your Somfy equipment with TaHoma & HomeKit:

- Simply ask Siri and control your home by voice
- Or find your equipment in Apple Home app ready to be controlled from all your Apple devices

Which TaHoma solution?

The current compatibility concerns the **2nd generation of TaHoma box**.

The 1st generation of TaHoma box & Somfy box (both square-shaped), and TaHoma DIN-Rail are not compatible.

Which equipment?

A selection of Somfy equipment is compatible with HomeKit through TaHoma, as per Apple approval.

[See the compatibility list](#)

1/ Link your equipment to TaHoma

2 methods can be used:

With TaHoma

Start TaHoma solution

See instructions provided in packaging

Add equipment as explained in TaHoma

Mandatory if you have:

- a TaHoma box of 2nd generation with no HomeKit details
- already TaHoma at home

And can be used in any other cases

OR

With Apple Home app only

Start TaHoma solution

Note:

- Your TaHoma solution must be plugged to power supply
- For TaHoma box of 2nd generation, it must also be connected to the Internet router

Add equipment to TaHoma as explained below

Link equipment...

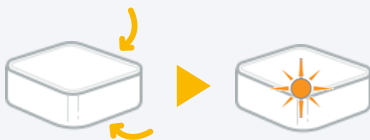

Long press
on **PROG** button

Equipment reacts

... to TaHoma

Short press
on **PROG** or **CFG*** button depending on your device
(located at the back side, or below)

Equipment reacts

*: for CFG button, you will need to use a paper clip (not provided)

2/ Connect TaHoma to HomeKit

Keeping the same 2 methods:

With TaHoma

Open TaHoma app

Follow instructions on HomeKit in TaHoma app (main menu)

OR

With Apple Home app only

Open Home app

Follow below instructions to add TaHoma

Add
an accessory

Scan
the setup code

Adding
TaHoma

Find
your equipment

Look for this code

- under your TaHoma solution
- or inside the packaging

HomeKit is a third-party service that is connected to TaHoma.
Specific information, screenshots and process may vary over time depending on updates by Apple.
